

RASGAS HEADQUARTERS

(PALM TOWER)

Client: RasGas

Category: Fit-out

Consultant: Arab Consulting Engineers

Project Manager: Hill International

Built-up area: 18,000 m²

Domopan's fit-out division undertook the supply, installation, and painting works of all internal wall partitions for RasGas's new 50-storey headquarters in West Bay.

Using laser technology for exact and accurate measurements, the internal walls had to meet very stringent and close to zero-tolerance requirements of both the supervision consultant and project manager. Accuracy was a must in order to accommodate custom-made glass imported from Italy that would be used for the office facades.
